

MUFUDZI CHRISTOPHER

Building financial integrity into every system I touch.

mufudzichristopher@gmail.com | +27 66 505 6597 | Cape Town, South Africa

ABOUT ME

I am an operations and automation specialist who builds systems that handle money. I studied Computer Science Information Systems through UCT's Commerce Faculty, which gave me a foundation in business logic rather than abstract computation. I am also in my final year of a Mathematics degree through UNISA — a self-funded pursuit because I believe analytical rigour separates good systems from great ones. I have built invoicing pipelines from scratch, automated workflows across entire agencies, and scaled my role from coordinator to operations lead in six months at two different organisations.

| *"I do not trust a system until I have tested it against reality."*

EXPERIENCE

Design Hive

2025 to 2026 · 6 months

Studio Coordinator to Operations and Automations Coordinator

- I built an invoicing pipeline that connected ClickUp to Quickbooks using REST APIs and webhooks. I validated data at every stage, audited data integrity with Postgres SQL queries, and made sure billing records matched the application state before invoices went out.
- I used Zapier to automate workflows across the agency, reducing manual data entry and cutting down processing time across design and operations teams.
- I prevented data mismatches and manual reconciliation work by designing structured test plans and covering edge cases across payment flows and document routing.
- My role changed from Studio Coordinator to Operations and Automations Coordinator within six months. I earned that by identifying problems and building solutions that scaled.

Construct Education

2024 to 2025 · 6 months

Learning Technologist to Systems Administrator

- I found and fixed infrastructure bottlenecks. I moved from Learning Technologist to Systems Administrator in six months by solving problems before they became emergencies.
- I ran system health checks every morning. I monitored application performance, flagged anomalies early, and fixed single points of failure before they affected operations.
- I built automated validation layers that cut down manual reconciliation work. I used SQL queries and schema validation to keep data consistent across different systems.
- I used Jenkins to set up and manage CI/CD pipelines, ensuring that deployments were smooth and automated tests ran reliably.
- I tracked and managed all QA work, bug reports, and testing cycles through Jira, ensuring full visibility and traceability across the team.

Freelance Web Development

2022 to present

Independent Consultant · Finance and Security Focus

- I caught a sophisticated honeypot scam that was disguised as a legitimate WordPress project. The lead developer was already costing the build. I was the only one who spotted the threat because I investigated thoroughly.
- I handled invoicing for clients across different countries using Django and Postgres to build custom billing systems that tracked payments, generated invoices, and managed client data securely.
- I containerised applications using Docker to ensure consistent development and deployment environments across different machines and operating systems.
- I used Postman for API testing and validation, ensuring that all endpoints handled edge cases and returned accurate responses.
- I have studied penetration testing and preventative security measures. I apply that mindset to everything I build. I don't just react to vulnerabilities. I anticipate them.

TECHNICAL SKILLS

TEST AUTOMATION	Playwright, Selenium, Manual Testing	CI/CD & WORKFLOW	Jenkins, Zapier, CI/CD Pipelines
DATABASES	Postgres, SQL, Complex Joins, Schema Validation	API & INTEGRATION	RESTful APIs, Webhooks, Postman
DEVELOPMENT	Python, Django, Docker	PROJECT MANAGEMENT	Jira, Agile Methodologies
SECURITY	Penetration Testing, Threat Detection		

EDUCATION

BSc Mathematics and Applied Mathematics

2024 to 2026

University of South Africa (UNISA) — Final Year · Self-led

Computer Science Information Systems

2021 to 2023

University of Cape Town — Commerce Faculty

CERTIFICATIONS

- KANZ AI Recruiter 2030 — July 2026
- KANZ Participation — AI Recruitment — July 2026
- Design Thinking Foundation — Hasso Plattner Institute, UCT, 2019
